

ReceiptDrop — Getting Started

A quick guide for testers & new users

ReceiptDrop reads your receipts with AI and saves them locally on your phone, organized by category — great for tax records. There's also **Check a Bill**, a table-side tool that catches billing mistakes before you pay. Everything below takes about two minutes to set up.

1 Add a Receipt — Share Sheet

1. Open the receipt (email, Photos, Safari, PDF, etc.)
2. Tap the **Share** icon
3. Choose **ReceiptDrop** from the list
4. Pick a category, tap **Submit**

Works from almost any app that can share a photo or PDF.

2 Add a Receipt — In-App

1. Open ReceiptDrop, tap **New Receipt**
2. Take a photo or pick one from your library
3. Pick a category, tap **Submit**
4. Watch it go: "Reading receipt..." → "Saving..."

If a submission fails, it's saved to the Retry Queue automatically.

3 Check a Bill at the table

- From the home screen, tap **Check a Bill** and photograph the itemized bill (auto-capture torch camera).
- ReceiptDrop lists every item and flags doubled charges, price mismatches, and whether gratuity is already included — plus a suggested tip.
- Send or share the summary, or tap **Save to Receipts** to also file it in your regular records.

QUICK START GUIDE

1 · Choose an AI provider

Settings → AI Provider. Choose Claude, OpenAI, or Gemini and paste that provider's API key (get a "Test Key" checkmark before relying on it). Or pick **Apple On-Device** — no key needed, works fully offline (requires Apple Intelligence, iOS 26+).

Where your receipts go

Files app → On My iPhone → ReceiptDrop → Receipts → your category folder. Each folder has the receipt images/PDFs plus a `_log.csv` that opens as a clean spreadsheet in **Numbers**.

2 · Set up categories

Settings → Manage Categories. Add categories that match how you file receipts (e.g. Office, Travel, Meals). Everything starts filed under "Sample Category" until you set your own up.

History & Retry Queue

The **History** tab lists every submission. If one fails (bad photo, no connection, provider error), it lands in the **Retry Queue** — retry it individually or tap "Retry All."

GOOD TO KNOW

Private by design

Receipts are stored locally on your phone, not on a company server. Turn on **Offline Mode** to keep every extraction fully on-device.

Share sheet, PDFs too

Photos and PDFs both work — a scanned or emailed PDF receipt shares in just like a photo.

Vendor search

Receipts are auto-classified by vendor type, so you can search in plain language (e.g. "restaurants over \$50").

ReceiptDrop Cheat Sheet

Everything at a glance

Add via Share Sheet

Share icon → ReceiptDrop → pick category → Submit

Add In-App

New Receipt → camera / library → pick category → Submit

Check a Bill

Photograph itemized bill → flags doubles, mismatches & gratuity → suggested tip

AI Providers

Claude · OpenAI · Gemini (*needs API key*)
Apple On-Device (*no key, offline*)

Categories

Settings → Manage Categories — add / rename / remove your own

Find Your Files

Files app → On My iPhone → ReceiptDrop → Receipts → category

Spreadsheet Log

Tap the `_log.csv` in a category folder → opens in Numbers

Retry Queue

Failed submission? It's queued — retry one, or "Retry All"

Privacy

Receipts + data stay on your phone. Offline Mode = zero cloud calls
